

CONCEALMENT SHELF INSTALLATION

Read Carefully Before Installation

The Tactical Walls Concealment Shelf are designed primarily around a standard 2x4 construction framed 16" on center wall studs. If your studs are not 16" apart, your installation will need to be adjusted accordingly. It is crucial that the shelf is fastened to studs to avoid it pulling off the wall. A professional is recommended but not required for a safe and accurate installation.

SAFETY FIRST!

Before installing your concealment shelf on your wall, make sure the shelf unit is installed with proper hardware and/or support brackets to safely support your concealed items. **AN IMPROPERLY INSTALLED SHELF MAY CAUSE BODILY HARM AND/OR CAUSE DAMAGE TO USER EQUIPMENT.**

GOT TOOLS?

Studfinder, tape measure, level, pencil/marker, sharp blade, and drill/driver

WE RECOMMEND!

A second pair of hands and eyeballs will significantly ease this installation process, especially for larger shelves.

FINALLY, READ AND STUDY ALL INSTRUCTION STEPS BEFORE DRILLING & FASTENING!

Have questions? Contact us via provided support email below or visit our website for installation video tutorials. Of course, don't forget to like and follow Tactical Walls and share your setup with us and the world!
